

Fidel Ivan C. Racines

ML / AI Engineer

Profession Profile

AI and ML developer with 4+ years in technical and business research through data and model creation. Helped increase value in the company through state of the art research and development.

Portfolio: [Link](#)

Education

Master of Science in Machine Learning & Artificial Intelligence

Liverpool John Moores University (UK)

April 2022 – April 2024

Bachelor of Science in Computer Science

Xavier University (Philippines)

June 2015 – March 2020

Certifications

- ❖ Executive Post Graduate Programme in ML and AI ([certificate](#))
- ❖ Data Science Fellowship ([certificate](#))
- ❖ 365 Data Science Program ([certificate](#))
- ❖ Deep Learning with Pytorch for Medical Image Analysis ([certificate](#))

Work Experience

*** AI/ML Engineer (Hitachi Payment Solutions)**

April 2026–present

Creating and Improving AI/ML solutions with regards to secure payments of clients

*** Data Scientist (BSP)**

Aug 2025–Feb 2026

Developed AI use cases to help the Central Bank with bank supervision and business processes

*** AI Software Developer (AMA university)**

May 2024–Nov 2024

Developed AI softwares to increase productivity in the University and help students upskill with the help of AI.

*** AI Engineer (DOST FNRI)**

May 2023–April 2024

Developed projects with AI/ML components to combat malnutrition in the Philippines.

*** SEO Specialist (ThinkLogic Media Group)**

Oct 2021–May 2022

Successful migrated SEO metrics to new Domain.

Technical Skills

Computer Vision – Tensorflow, Pytorch, Keras, OpenCV, CNN, RNN

ML Models – Linear, Logistic, Ridge, & Lasso Regression, Naïve Bayes, SVM, Decision Trees, Random Forest, Gradient Boosting

Stats – Probability, Central Limit Theorem, Hypothesis Testing, Critical Value Method, P-Value Method

Data Vis – Pie Charts, Line Charts, Bar Charts, Histogram, Scatter Plots, Time Series Plots, Geo Spatial Visualization

Cloud – AWS, Azure, Docker, IOT hub, Pyspark, DataBricks

ML Ops – MLflow, Pycaret, Airflow, Colab

LLMs - Chat-gpt, LLama, Azure AI foundry, AWS Bedrock, Langchain, LLama Index, RAG, Fine-tuning

Web Apps - Streamlit, Flask, Quart

[Projects](#)

[Philippine AI Lawyer](#)

The Philippine AI lawyer is an LLM chatbot trained using the knowledge base of Philippines laws. Its answers are tailored in the context of Philippine law and Supreme court decisions.

[Predicting malnutrition in children below 5 years using Artificial Intelligence](#)

This study leverages machine learning to predict malnutrition in children under five by analyzing a diverse set of variables, including anthropometric data, socioeconomic factors, dietary habits, and breastfeeding practices from the DOST-FNRI. By accurately classifying malnutrition risks, these models offer a powerful tool for early diagnosis, enabling healthcare providers, policymakers, and community organizations to implement timely, targeted interventions. Early predictions allow for effective allocation of resources to areas most in need, ultimately helping to reduce malnutrition's prevalence and its negative impacts on health, productivity, and poverty.

[Paper](#)

[Chest X-ray Effusion](#)

This project allows us to detect if there is effusion in the chest x-ray. Chest X-ray exams are one of the most frequent and cost-effective medical imaging examinations available. However, clinical diagnosis of a chest X-ray can be challenging and sometimes more difficult than diagnosis via chest CT imaging.

[Australian Housing Market](#)

This Case Study explores the Australian Housing Market and what factors are affecting the price of homes in Australia

[Bike Sharing App](#)

This project aims to understand which factors are affecting the usage of a mobile app (bike sharing) at a time of a day.

[Bike Buyer Prediction](#)

Using the Australian dataset for bike buying, this study aims to predict if a certain individual according to his profile will most likely buy a bike.

[Case Study Lending Club](#)

This Case Study aims to understand what factors are affecting why applicants are likely to default on their loans.

[Case Study Credit Fraud](#)

This Case Study aims to understand what variables are more likely to contribute to a transaction becoming a credit fraud
